-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. Claims 1-14 are presented for examination.
2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b)

3. Claims 9-13 are rejected under the judicially created doctrine of double patenting over claims 1-5 of U. S. Patent No. 6,647,433 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming

Art Unit: 2182

common subject matter, as follows: Claim(s) 1-5 of patent # 6,647,433 contain(s) every element of claim(s) 9-13 of the instant application and as such anticipate(s) claim(s) 9-13 of the instant application.

Claims 1-8 and 14 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-5 of U.S. Patent No. 6,647,433. Although the conflicting claims are not identical, they are not patentably distinct from each other.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Sakashita et al., US Patent no. 5,109,190.

6. As to claims 1, 7-9, 12 and 13, Sakashita shows a method and a storage system comprising: issuing one or more commands to one or more inputs of a general purpose input/output (GPIO) system [col 1, lines 50-53], wherein the commands cause a first output of the GPIO system associated with a first input of the inputs to issue a control signal to a latch associated with a port bypass circuit (PBS) [col 1, lines 58-63; col 4, lines 1-30; col 9, lines 68 to col 10, line 9; fig 5], and a second output of the GPIO system associated with a second of the inputs of the GPIO system to issue a clock signal to a latch associated with a PBC addressed by the received commands [col 6, lines 26-49; fig 1]; and setting the state of the PBC with the received control signal if the

Art Unit: 2182

control signal and the clock signal are consistent to change the state of the PBC [col 11, lines 1-10].

7. As to claims 2-6, 10, 11, and 14, Sakashita shows the system and method, wherein the control signal changes a state of the PBC [col 8, lines 16-21]; wherein the command is sent to a first GPIO device within the GPIO system to issue the first output, and to a second GPIO device within the GPIO system to issue the second output [col 10, lines 54-68]; the state of the PBC does not change unless the command is accurately received and a single latch associated with the PBC is addressed [col 8, lines 40-42]; wherein the command is a serial bus command addressing the PBC [col 4, lines 58-59]; wherein the command is an I2C command addressing PBC [col 5, lines 7-20]; constructing the one or more control commands in accordance with an error checking protocol [col 6, lines 10-12]; wherein the error checking protocol includes zero or more of calculating a cyclical redundancy check value for each command, or encoding each command [col 5, lines 60-65; col 11, lines 17-24].
